## VIRIBRIGHT T8 LED TUBE

### Caution:

Please read and follow these instructions before installation.

- Install the tube by qualified electrician and technician.
- Consult the competent electrician if you have any uncertainty about the installation or the use of the product.
- Do not impact the tube and all its components by any external weight or mechanical force.
- Do not use sharp tools near or on the surface of the tube.
- Hands must be dry during installation.
- Switch off the power before installation.
- Make sure the base is mounted on a stable, even and secure surface.
- Beware of electric shock when replacing tube.
- Use or store the tubes in dry places. If the tubes are used for outdoor application, waterproof holders and covers are needed.
- Replace the tube immediately if you find any leakage or damage on the tube.
- Stop use and replace if the product becomes dim, out of order or begins to blink.
- If failure occurs do not attempt to repair product.
- This is not a dimmable product. Do not use with dimmers.

### Installation:

#### 1/. Without Ballast and Starter

- Directly connect the wires as shown in diagram 1. Join either A or B, or A & B together with the "Live" wire. Join either C or D, or C & D together with the "Neutral" wire.
- Install the T8 LED tube on the bracket.

#### 2/. With Electronic Ballast

- Take off the fluorescent tube.
- Cut the wires as shown on the dotted line of the diagram (2b).
- Bypass the ballast and remove the starter (if any) within the bracket.
- Reconnect the wires as shown. Join either A or B, or A & B together with the "Live" wire. Join either C or D, or C & D together with the "Neutral" wire.
- Install the T8 LED tube on the bracket.

#### 2a. Circuit of Fluorescent Tube with Electronic Ballast

#### 2b. Reconnected circuit of VIRIBRIGHT T8 LED Tube
